SUMMARY

Cybersecurity professional specializing in SOC operations, threat detection, vulnerability management, and application security. With CEH v12 and Google Cybersecurity certifications, I have hands-on experience in SIEM monitoring, security log analysis, incident investigation, and MITRE ATT&CK-based attack analysis. I work with tools including LogRhythm, Wazuh, Splunk, Elastic, and Spharaka Sphere. My broader technical foundation includes Python, Linux, networking, cloud security, and DevSecOps technologies such as AWS, Azure, GCP, Docker, Kubernetes, Jenkins, and CI/CD pipelines.

EDUCATION

B.Tech in Electronics and Computer Engineering (AI & DS) | 2021 - 2025 | CGPA: 8.34 / 10
Karunya Institute of Technology and Sciences, Coimbatore, India

EXPERIENCE

SOC Analyst Intern – Alcon Cyber Security Consultancy
May 2026 – Present | Tiruchirappalli, Tamil Nadu, India | On-site

- Gained hands-on experience with LogRhythm SIEM and Spharaka Sphere™ for security monitoring, log analysis, and SOC investigations.
- Investigated Docker daemon exposure and SSH attack scenarios, analyzing relevant logs and mapping observed activity to MITRE ATT&CK techniques.
- Analyzed XOR-obfuscated Windows 11 lab malware activity to understand suspicious behavior and support investigation workflows.
- Conducted Active Directory security assessments and attack-path analysis in a controlled lab environment.
- Researched detection approaches for exposed Docker TCP sockets and developed SOC-focused detection use cases.

Cybersecurity Intern – Shop Online New York
January 2025 – April 2025 | Remote

- Supported static code analysis to identify potential security flaws in web applications.
- Identified and reported 20+ medium/high severity vulnerabilities.

TECHNICAL SKILLS

- **SIEM & Security Monitoring:** LogRhythm, Spharaka Sphere™, Wazuh, Splunk, Elastic, Snort, Wireshark
- **Application Security:** SAST, SonarQube, Snyk, OWASP ZAP, Burp Suite, IAST (Foundational Knowledge), Web Application Security Testing, Trivy
- **Networking & Security:** TCP/IP, DNS, HTTP/HTTPS, Firewalls, VPNs, IDS/IPS, pfSense, Nmap, Access Control
- **SOC & Threat Detection:** Log Analysis, Incident Investigation, Threat Detection, Threat Hunting, MITRE ATT&CK, Cyber Kill Chain, Active Directory Security
- **Offensive Security:** Penetration Testing, Red Teaming Fundamentals, SSH Attack Analysis, Docker Daemon Exposure Assessment, Metasploit
- **Cloud & DevSecOps:** AWS, Azure, GCP, Cloud Security, Docker, Kubernetes, Jenkins, Terraform, Ansible, CI/CD, OpenStack
- **Programming & Scripting:** Python, Bash, PowerShell, Java, JavaScript, KQL, HTML
- **Security Frameworks & Compliance:** OWASP Top 10, ISO 27001/27002, NIST, GDPR

PROJECTS

1. SOC Investigation & MITRE ATT&CK Detection Use Cases

- Analyzed suspicious activity in a controlled Windows 11 lab involving XOR-obfuscated malware samples.
- Investigated relevant logs to understand suspicious behaviors and support threat analysis.
- Mapped observed attack behaviors to relevant MITRE ATT&CK tactics and techniques.
- Explored SOC detection logic and investigation workflows for identifying potentially malicious activity.

2. Docker Daemon Exposure Assessment & Detection

- Researched security risks associated with exposed Docker daemon TCP sockets and misconfigured access.
- Examined potential attack scenarios involving unauthorized Docker API access in a controlled lab.
- Analyzed relevant logs and investigated detection opportunities for suspicious Docker daemon activity.
- Developed SOC-focused detection ideas to help identify and investigate container infrastructure exposure.

3. Wazuh Home SOC Lab with Network Security Monitoring

- Built a home SOC lab to centralize endpoint and security event monitoring using Wazuh SIEM.
- Configured pfSense firewall capabilities and explored network traffic monitoring with Snort and Suricata IDS.
- Investigated security alerts and analyzed network and endpoint logs to understand suspicious activity.
- Explored file integrity monitoring (FIM), network segmentation, and detection rules for common lab attack scenarios.
- Practiced mapping security events to MITRE ATT&CK techniques to improve investigation and incident triage skills.

CERTIFICATIONS

- Certified Ethical Hacker v12 (CEH) - ECCouncil
- Google Professional Cybersecurity Certification - Coursera
- Cisco Cybersecurity Essentials - Cisco
